Subject: P34-24512 additional questions from the FCC (95128)

In regards to Operational Description 3.7 Product Security please address the following questions:

1. How is the PLMNID update process initiated? Through Nextivity or through the carrier?**[ML]** The process is initiated by the end user, using a SW application provided by Nextivity. This SW application will give the end-user the option to change the PLMN-ID to any PLMN-ID for which carrier approval has been obtained. For example, the current application was filed with the approval of AT&T. If T-Mobile approves the use of this product as well, the end-user will have the option of configuring the system using the Nextivity provided SW application to work on either the AT&T or T-Mobile network (only one network at a time).
2. Is the device configured from the manufacturer to work on only single provider's network or multiple? How is it decided?**[ML]** It depends on how the system is sold. If, for example, the system is sold to AT&T, it is configured to only work on the AT&T network. If it is sold directly to an end-user, it can be configured to contain the information for more than one carrier (like T-Mobile and AT&T for example). The end user can then pick on whose network he wants the system to work.
3. After the End User initiates a PLMNID update is the now configured to work with multiple carrier networks or a single network?**[ML]** Still a single network. It never boosts two networks at the same time.
4. How is the customer data and registration of the booster managed before and after an update?**[ML]** Our understanding of current practice is that the burden is on the subscriber to notify the carrier of the use of the booster. This obligation can be re-enforced with the end-user when an update is done.
5. Does Nextivity plan to provide a list of carriers that the device is going to be certified for?**[ML]** The current application is for the AT&T network only as this is the only consent that we have for this specific product. As we get new consents, we would inform the commission (possibly through the filing of a permissive change) that a new consent has been received and that the list of carriers supported by the product needs to be extended to include a new carrier.
